

Briton

Door Coordinators

Door control

Briton Door Coordinators are designed for use on pairs of doors, where the inactive is required to close before the active leaf. The door selector is suitable for double rebated doors and fire doors. Door coordination is a basic requirement for all self-closing pairs of doors that are rebated or have astragals.

The Briton Door Coordinator is a medium-duty commercial product for use in projects with double doors, such as electrical cupboards, duct doors, or plant rooms
