Brio® Single Run

Top hung straight sliding architectural systems
for panels up to 350kg

Brio® where ideas unfold

Watch your adventurous architectural ideas unfold into exciting reality with the Brio range of sliding and folding door hardware.

Brio is passionate about shaping the spaces in which people live, work and play. With subsidiaries in the UK and USA – Brio is recognised by architects worldwide as a leading design and manufacturing company.

Brio's R&D department brings a strong design element to the business, developing and testing ground breaking concepts that continue to be at the forefront of the industry.

So it's no surprise our name Brio translates to Energy, Spirit and Vitality – the core values that drive us to always discover new solutions for our customers.

We are committed to the continuous improvement of quality. That is why Brio, located in Sydney, is certified to Quality Management System AS/NZS ISO 9001:2008.

Brio, part of the Allegion family of brands

Single Run 80 and 100

Brio's Single Run 80 and 100 systems are designed for interior and exterior sliding shutters and doors up to 80 and 100kg in weight for residential or light commercial applications. These systems are suitable for single panels sliding to one side or two panels bi-parting in a single run of track. Alternatively, panels can slide parallel to each other to suit almost any configuration.

The compact structural aluminium 80A track can be top-fixed through the track or side fixed using the Brio stainless steel face fixed mounting brackets for single or double track runs. The 80A track profile ensures the wheels cannot disengage and serves to reduce the risk of contamination as debris is less likely to accumulate on the raised rails. The track is available in either mill or 25 micron clear anodised aluminium for improved corrosion performance.

Single Run 80's glass reinforced nylon hanger body with stainless steel fixing plate and hanger bolt ensures long life and high corrosion resistance. Single Run 100's cast alloy hanger body offers improved performance for heavier panels and is also available with stainless steel fixings. Both hangers use 4 wheels with reinforced nylon tyres which are available with a choice of chrome or stainless steel high-speed precision bearings. This combined with the unique 80A track profile offers years of silent, smooth operation and superior rolling performance.

Max panel weight: 80kg

Max panel height: 3000mm

Min panel thickness: 28mm

Hanger material: Glass reinforced Nylon

Plate material: Mild or stainless steel
(bearing dependent)

Application: Interior and exterior sliding timber or aluminium shutters and doors

Max panel weight: 100kg

Max panel height: 3000mm

Min panel thickness: 28mm

Hanger material: Cast alloy, EPD black coated

Plate material: Mild or stainless steel
(bearing dependent)

Application: Interior and exterior sliding timber or aluminium shutters and doors

The hanger and fixing plate allow simple height adjustment by tightening or loosening the hanger bolt. The hanger plate also features two anti-slip tabs to prevent the door from disengaging from the hanger bolt. A comprehensive range of bottom channels and guides are available to suit a wide range of applications.

Both systems are designed to operate with Brio's new soft close devices for panels up to 80 and 100kg. The neat design allows the device to be housed inside the track ensuring minimum clearances between track and panel are maintained.

The soft close is easy to install and simple to operate as the spring and damper work together to control the panel. The mechanism catches the moving door and reduces its speed before retracting it towards the jamb ensuring a quiet and soft stop every time. This reduction in speed also means little fingers are kept safe from slamming doors.

Soft Close 80 and 100

Single Run 120

Single Run 120

The Brio Single Run 120 system is designed for interior and exterior sliding shutters and doors up to 120kg in residential or light commercial applications. It uses 4 nylon tyred, chrome or stainless steel high-speed precision bearings for smooth operation. The 120 series' cast stainless steel hangers make it a durable solution for high traffic applications with impressive corrosion resistance.

There are several dedicated hangers to suit a wide range of applications and door constructions, such as timber, aluminium or MDF. Each hanger has been designed for simple installation and ease of adjustment. A comprehensive range of bottom channels and guides are also available.

The system is suitable for a single panel slid to one side, or two panels bi-parting in a single run of track. The 120 track can be soffit-fixed through the top, or side-fixed using Brio stainless steel face-fixed mounting brackets for single or double track runs. Our new 120R track is suitable for internal applications for easy integration with ceiling tiles. 120R is only available in 15 micron clear anodised aluminium but our 120 track is available in mill and 25 micron clear anodised for improved corrosion performance.

Max panel weight: 120kg

Max panel height: 3000mm

Min panel thickness: 19mm

Application: Interior and exterior sliding timber or aluminium shutters and doors

Single Run 180

Designed by MAKE Architecture

Single Run 350

Joinery by Nicco Joinery

Single Run 180

The Brio Single Run 180 is arguably the most versatile of all the Brio straight sliding systems. The 180kg panel capacity can accommodate large panels, for example, an aluminium framed panel 2.5m x 2.5m with 10mm thick glass can slide on a single track or parallel to another. Single Run 180 is suited to both internal and external residential, commercial and light industrial applications.

As with all the straight sliding architectural systems the preferred choice of material is stainless steel. Cast marine grade 316 stainless steel is used in the hanger body to minimise joints and screws for the ultimate in strength. Only with cast technology is it possible to form complex shapes and introduce safety features such as anti-slip. Should a locking nut become loose using Brio hardware the panel cannot simply slide off it's hanger.

Stainless steel comes as standard for all Brio Single Run Architectural Systems. The only optional upgrade are the bearings. There is a choice of chrome steel bearings or full stainless steel for those more exposed applications.

The 180's versatility comes into play with hangers to suit heavy timber, aluminium and metal doors with options for corner, top fixing or bolting through angles and box sections. The track can be soffit-fixed through the top, or side-fixed using Brio cast stainless steel face-fixed mounting brackets for single or double track runs.

The 180 track is available in either mill or 25 micron clear anodised aluminium for improved corrosion performance. A comprehensive range of bottom channels and guides are available to suit a wide range of applications.

Max panel weight: 180kg

Max panel height: 3000mm

Min panel thickness: 35mm

Application: Interior and exterior sliding timber, metal or aluminium shutters and doors

Single Run 350

Structural aluminium track with 3mm wall thickness enables Brio architectural systems to support panels weighing up to 350kg. Brio Single Run 350 is ideally suited to large openings in residential, commercial and industrial interior or exterior applications.

To accommodate these higher loads, the wheels used in Single Run 350 increase in size. Like all Brio Single Run systems, the combination of precision bearings, nylon tyred wheels and our unique track profiles offer quiet finger-tip control.

Brio Single Run is designed to be discrete which is why our square track is ideally shaped for recessing into the ceiling line. Two parallel track seal grooves locate brush seals that hide the hanger bolts and brackets, while providing sound reduction. The track can be soffit-fixed through the top or side-fixed using Brio stainless steel face-fixed mounting brackets for single or double track runs.

The 250 track is available in either mill or 25 micron clear anodised aluminium for improved corrosion performance. A comprehensive range of bottom channels and guides are available to suit a wide range of applications.

Max panel weight: 350kg

Max panel height: 3300mm

Min panel thickness: 35mm

Application: Interior and exterior sliding timber, metal or aluminium shutters and doors
